Profile

To me, DevOps is about balance, moving fast without breaking things. I spent two years keeping the infrastructure behind Bangladesh's largest mobile financial service online, where a bad deploy is felt by 70 million people the same afternoon. I automate the repetitive work, instrument the parts I cannot see, and would rather run a boring reproducible system than a clever one. I am completing a Master of Computer Science in Machine Learning and Big Data at the University of Wollongong.

Technical Skills

- **Containers and Orchestration:** Docker, Kubernetes, Helm
- **CI/CD and GitOps:** Jenkins (CI), Argo CD (CD), release automation, automated patch management
- **Configuration Management:** Ansible, YAML
- **Observability:** Prometheus, Grafana, Sysdig, ELK Stack (Elasticsearch, Logstash, Kibana), alerting, incident response
- **Networking and Delivery:** F5 BIG-IP (LTM, ASM), load balancing, failover, Cloudflare DNS, TYK API Gateway
- **Security:** WAF policy design, DDoS mitigation, OWASP Top 10, vulnerability assessment and penetration testing
- **Platforms:** Linux/Unix administration, VMware Cloud Foundation
- **Languages and Data:** Python, Bash, SQL, MySQL, Hadoop
- **Machine Learning:** TensorFlow, PyTorch, Keras, Scikit-Learn, XGBoost, Pandas, NumPy, time-series forecasting
- **Exposure:** AWS, Terraform

Professional Experience

Platform and Integration Engineer - bKash Limited Jun 2023 – Jul 2025
Dhaka, Bangladesh

- Held 99.9 percent uptime across core and in-house products serving over 70 million customers, tuning load balancing and failover on F5 LTM alongside the network team.
- Cut operational hazards by 50 percent by automating 70 percent of routine platform tasks with Bash scripts across the production estate.
- Improved deployment consistency across dev, staging, and production by 95 percent by containerising legacy applications with Docker and Helm, promoted through a Jenkins CI and Argo CD GitOps pipeline.
- Automated patch management across three environments by writing over 300 Ansible playbooks, replacing manual per-host work.
- Brought incident response time down 35 percent by integrating Sysdig, Prometheus, and the ELK Stack into one alerting, monitoring, and logging pipeline.
- Reduced security incidents by 30 percent through more than 200 WAF policies deployed across F5 endpoints, backed by quarterly patching and penetration testing of every VMware Cloud Foundation environment.

Research Engineer - AIMS Lab, United International University Jun 2022 – Jun 2023
Dhaka, Bangladesh

- Secured a 1,000,000 BDT research grant for iPower, an intelligent electricity demand forecasting and optimisation application, by carrying it from requirement analysis through to a working solution.
- Improved energy prediction accuracy with transformer-based forecasting models, and handled model drift in real time so predictions stayed reliable after deployment.
- Delivered the solution in collaboration with the Bangladesh Power Development Board, validating IoT-collected data before it reached the models.
- Published and presented the findings in peer-reviewed journals.

Education

University of Wollongong, Master of Computer Science (Machine Learning and Big Data) Jul 2025 – Jul 2027

Islamic University of Technology, Gazipur, BSc in Electrical and Electronic Engineering Jan 2018 – May 2022

- CGPA 3.67 out of 4.00, top 30 percent of the department. Partial OIC Scholarship, USD 14,500.

Publications

- **Energy Demand Forecasting and Optimizing Electric Systems for Developing Countries**, IEEE Access, vol. 11, pp. 39751–39775, 2023. Cited 40 times. IEEE Xplore
- **Time-series Multivariate Multistep Traffic Flow Forecasting using Temporal Fusion Transformers**, International Journal of Intelligent Transportation Systems Research, 2025. SpringerLink
